

digiquest-webapp Documentation

Note:

The documentation is still incomplete and most documentation is missing. if you need help on a specific topic [contact us](#).

1. Installation

To run the digiquest web-application you need a servlet container like [Apache Tomcat](#).

For the following steps, we assume that you use Apache Tomcat as a standalone server. The default installation of Tomcat is suitable to run the digiquest web-application.

1. Download [digiquest-webapp](#) and extract the archive to a place you like.
2. Copy `digiquest.war` to `$TOMCAT_HOME/webapps`.
3. Start Tomcat. Usually this is done by invoking `$TOMCAT_HOME/bin/startup[.bat|.sh]`.
4. Point your browser to <http://localhost:8080/digiquest> and you should see the main page of the web-application.
5. Point your browser to <http://localhost:8080/digiquest/admin> and you should see the admin page of the web-application.
