

Download digiquest

You can find a list of all available releases and packages on the [Sourceforge download page](#).

1. Packages

Starting with release 0.2.0 there will be different packages that may be downloaded.

1.1. digiquest-source

This package contains the complete sources. Each of the following packages may be built from these sources.

Download [digiquest-source](#).

1.2. digiquest-desktop

This package contains the binary digiquest-desktop distribution. digiquest-desktop is a Java Swing application and needs a Java Runtime to run. digiquest-desktop can be run on all platforms where Swing applications run, e.g. Windows or Linux systems.

Download [digiquest-desktop](#).

1.3. digiquest-webapp

This package contains the digiquest-webapp. digiquest-webapp is a servlet written in Java. The servlet displays questionnaires as HTML or WML pages, so users can fill out the questionnaires using a browser or cell-phone. The servlet needs a webserver with a servlet container (e.g. Apache and Tomcat) to be run.

1.4. digiquest-palm

This package contains the binaries of digiquest-palm. digiquest-palm is an application that runs on PalmOS devices. digiquest-palm allows users to fill out questionnaires on any PalmOS devices where a Java Micro Edition is available. With the included conduit and Java application, questionnaires are transferred to the device and results are transferred from the

device to a workstation.
