

History of Changes

1. Version 0.3.0 (not released yet)

- [webapp] Question text as HTML output is formatted according to the format included in a question's text (dd)

2. Version 0.2.1 (2003-07-17)

- [desktop] Doubleclicks with the mouse are now supported in the Questionary, ResultSet and Profile Management dialogs. Doubleclicking will start a questionnaire, send a resultset oder modify a profile. (dd)
- [desktop] QuestionaryManagementDialog has been reworked. Buttons are on/off depending on table's selection. I18N is done. (dd) Fixes bug [#746308](#).
- [desktop] When a questionnaire is started and no export profile exists to take the result, the user is asked to create a profile, instead of showing an exception caught box (dd) Fixes bug [#770501](#).
- [desktop] Added I18N to ExportDialog (dd)
- [desktop] When a profile for an existing ResultSet should be reassigned, only export-capable profiles may be choosed (dd) Fixes bug [#772247](#).
- [desktop] The application now asks for confirmation if the user tries to quit while a questionnaire is still running (dd) Fixes bug [#772240](#).
- [desktop] Profile to use and when to send may now be choosed in one dialog (dd) Fixes bug [#771782](#).
- [desktop] Now using formatted question texts. Added an example questionnaire to DummyDriver (dd)
- [core] Added class QuestionText. Questions now may contain formatted text (dd)

3. Version 0.2.0 (2003-07-12)

- [webapp] Added a german characters support in wml. (ap)
- [core] Undo functionality is now provided by the RuntimeQuestionary. Going back to already shown Questions is now possible. Implemented this in digiquest-desktop. (dd)
- [webapp] Added new servlet for configuration of MySQL db. (ap) Fixes bug [#768352](#).
- [webapp] A proper tomcat installation fix this BUG. (ap) Fixes bug [#751893](#).
- [desktop] An error is shown if a user tries to cancel the profile chooser at the end of a

- questionary where the user can choose to select a profile or cancel the questionary. (ls)
Fixes bug [#746340](#).
- [desktop] An error is shown if a user tries to save a profile which export ability was removed and that has result sets associated with it. The profile is not modified. The bug remains open as a reminder for some design issues in the ResultSetManagement. (ls)
Fixes bug [#748096](#).
 - [desktop] An error is shown in the ImportStatusDialog when trying to import a questionary in the wrong format. The bug remains open as a reminder for the upcoming common exception model for digiquest to be reinvestigated then. (ls) Fixes bug [#750133](#).
 - [core] A questionary may only be started if at least one profile is available that can export (so the result may be saved) (dd) Fixes bug [#750131](#).
 - [desktop] ExportDialog is only shown if export profiles are available (dd) Fixes bug [#746327](#).
 - [desktop] ExportDialog now only shows profiles that really can export (dd) Fixes bug [#746330](#).
 - [webapp] WML is now supported in new servlets. (ap)
 - [webapp] Multiplechoice accept zero-selection now. (ap) Fixes bug [#748972](#).
 - [webapp] removed preselection "no" in Yes/No-question. (ap) Fixes bug [#748968](#).
 - [webapp] "go" - button without questionaries caused no questionary start. (ap) Fixes bug [#747391](#).
 - [core] Removal of Profiles that have Results associated to it can't be deleted anymore (dd) Fixes bug [#738766](#).
 - [desktop] ProfileChooser shown after a finished questionary only offers export capable profiles (dd) Fixes bug [#739138](#).
 - [core] Added methods in ProfileManagement Interface to retrieve export-/importcapable profiles (dd)
 - [webapp] The servlet works with navigation buttons in proper style now. (ap) Fixes bug [#743084](#).
 - [desktop] Improved the display of questions. (dd)
 - [desktop] A questionary can be canceled now. (dd) Fixes bug [#739877](#).
 - [core] Removed the use exception chaining to be compatible to J2ME. (dd)
 - [desktop] References to drivers in *ConfigDialog fixed. (ls) Fixes bug [#741384](#).
 - The build process has been updated to reflect the changes made to the source tree. New targets to create the distribution added. (dd)
 - Massive changes made in the source tree. The sources have been restructured for easier maintenace and to simplify the build process. (all)
 - [desktop] UI design has been improved and a consistent Look-and-Feel has been applied. (dd, hm, ls)
 - [desktop] I18N has started. First supported languages are English and German. (hm)
 - [desktop] Simplified/optimized handling of dialogs for driver configuration. (ls)

History of Changes

- [core] multiple results per question now supported, if question is flagged to produce multiple results. (dd)
- [core] Questions may be skipped (left unanswered) if allowed by the question. (dd)
- [core] Added profiles for IO operations. Consistent use of profiles in IO modules. (ls)
- [core] Split profiles in import and export section and added functionality for automatic detection. (ls)
- [webapp] Added servlets for administration and driver configuration. (ap)
- [desktop] Changed UI from MDI to SDI. (dd)
- Translation of source documentation to english has started. (all)
- [core] Conditions have been streamlined and simplified. (dd)
- [core] Restructured IO. Flexible architecture for custom implementation and easier implementation on other platforms. (ls)

4. Version 0.1.1 (2003-02-20)

- Started from scratch... (all)
- *deForm* has been thrown away. (all)

5. Version 0.1 (never released)

- Prototype *deForm* (all)
